

## VMware and QuickSpin

### Backup and disaster recovery for virtual machines

#### Overview

Intronis' support of VMware data allows MSPs to easily back up multiple VMware virtual machines across multiple servers to the cloud, local vault, or both. Backups are fully encrypted and undergo deduplication to speed transfer. Additionally, Intronis offers QuickSpin, a disaster recovery tool that allows you to restore virtual machines in minutes.

#### Key Features of the Integration

- Offer customers immediate business availability that limits VM downtime in the event of data loss
- Restore VMware data locally within minutes with QuickSpin, without the need for an on-site visit or extra software
- Consolidate multiple backup and disaster recovery tools with one convenient web-based solution

#### Convenience

VMware backups can be managed alongside other backup types in the central Intronis Partner Portal. Our convenient backup status dashboard also provides real-time client assessments for easy review and resolution. QuickSpin restores can also be run straight from the portal.

### Create Backup Set ✕

Backup Set Name: Backup Set 7 Type Select Recovery VM Destination Schedule Settings Finish

-  Files and Folders
-  SQL
-  Virtual Machines
-  Images

#### Virtual Machines

Choose this option to back up VMware and Hyper-V virtual machines.

Backup Set Name:

Backup Type:

- Hyper-V
- VMware
  - QuickSpin backup.** Allows immediate recovery in case of a catastrophic problem.
  - Standard backup.** Backs up your VMware image to the cloud or local storage (if local vault is enabled) for increased protection in the event of a disaster.

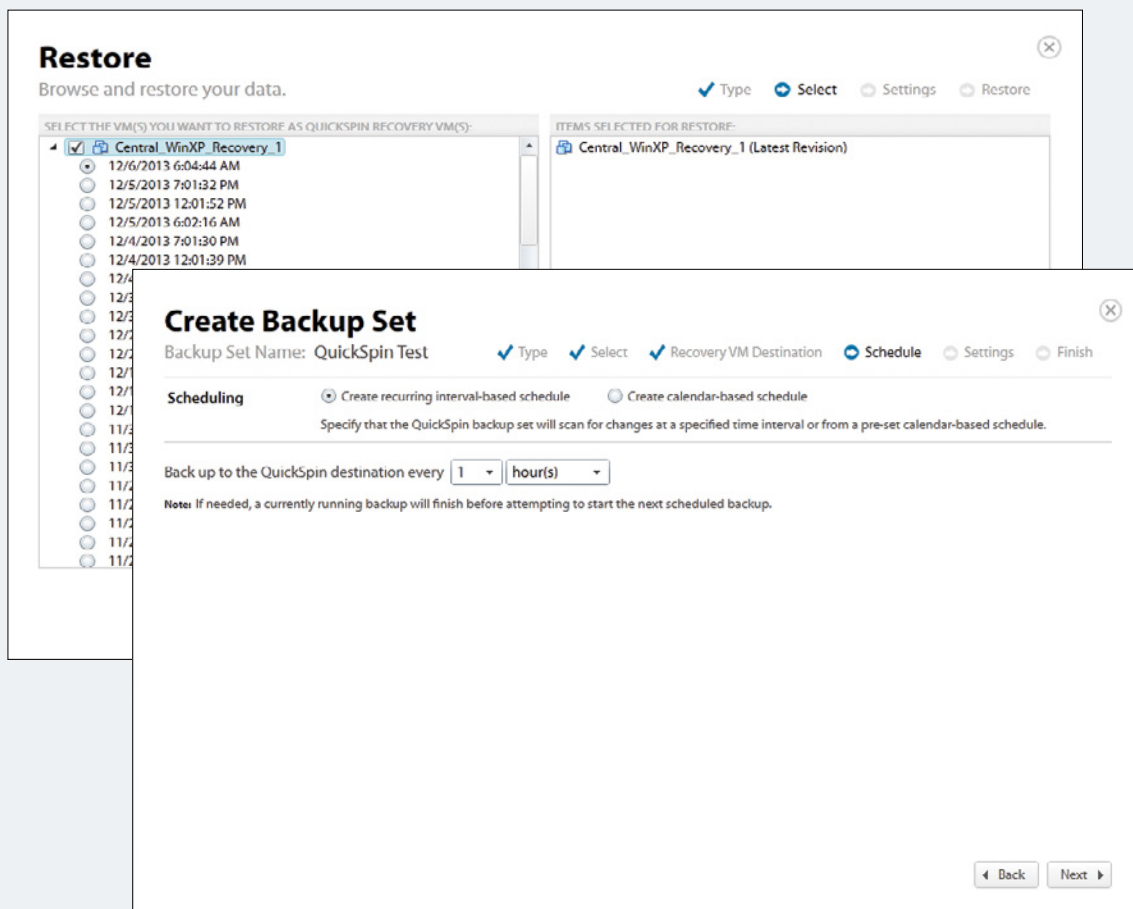

## Speed

Intronis' Intelliblox technology breaks VM data into blocks, and only blocks that have been recently modified will be uploaded in subsequent backups. And QuickSpin enables local VM data recovery in minutes, not hours. That means faster backups and restores, saving MSPs time and limiting downtime in the event of virtual data loss.

## Flexibility

Intronis VMware backup is flexible for MSPs that need to back up VMs to a local device, the cloud, or both. Users can customize retention and archiving settings, choosing to save or restore full VMs or just specific versions.

## ...▶ ABOUT INTRONIS

Intronis is an award-winning provider of world-class cloud backup solutions exclusively for the IT channel. Intronis offers the deepest Exchange and SQL backup on the market, securely protects physical and virtual data with native support for VMware, Hyper-V, and physical system images, and easily integrates with top RMM and PSA tools. Intronis' complete data protection platform has been field tested by thousands of MSPs and is centrally managed from a single console that can be customized and rebranded. In 2014, the company was recognized as a "Best Channel Vendor" by *Business Solutions Magazine* and one of the "Top 100 Cloud Computing Vendors" and "Top 20 Coolest Cloud Storage Vendors" by *CRN Magazine*.
